

Where are high- and low-VPD fires?

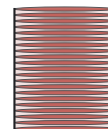

low VPD
n=79,312

middle VPD
n=79,211

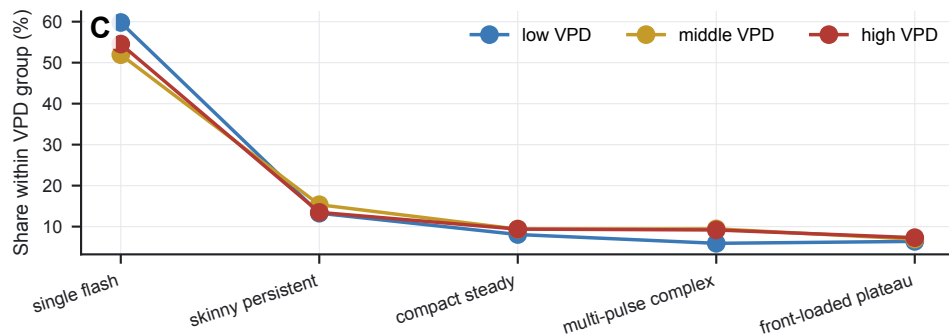

high VPD
n=78,712

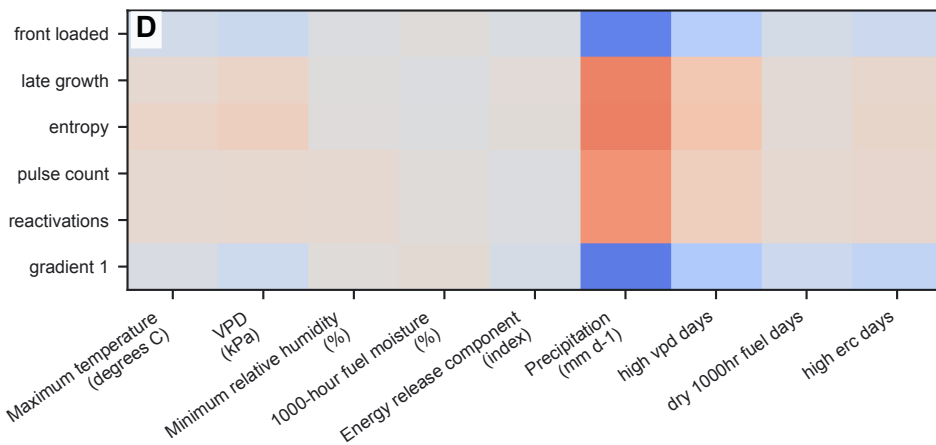

Climate dimensions used
(daily, at fire centroid)

- B**
- Temperature
 - VPD and humidity
 - Wind speed
 - Precipitation
 - Fuel moisture
 - Fire danger
 - ET, PET, solar radiation

Developmental-neighborhood prevalence shifts

Climate dimensions relate to different developmental responses

Association does not imply deterministic prediction
